

Material Types

The Material Types screen enables the entry of the types of materials your company works with. The *Abbrv* field appears in billing invoices and other areas where length needs to be small. Other areas allow for the full *Description* to be displayed.

Click on the **[New Material]** button to add a new material to the list. The **[Reports...]** provides a list of the materials entered. Other reports for material utilization and profit reports are located in other screen such as billing.

The **[Locator]** button brings up a screen that will display all the plants that have the material you specify.

Material Locator Screen

This screen allows you to select a material and then see the Plants that carry the item. The results are ordered by the lowest price.
